System Setpoints-Entering New Setpoint Variables

The status of the System Temperature Setpoints and Current operating Temperatures are viewed by depressing the **System Setpoints** Button.

A new Temperature Setpoint Can be entered by depressing any of the Oven or Washer Temperature Setpoint buttons above the Current Setpoint Temperature.

A new Setpoint can be entered when the Keypad window is displayed

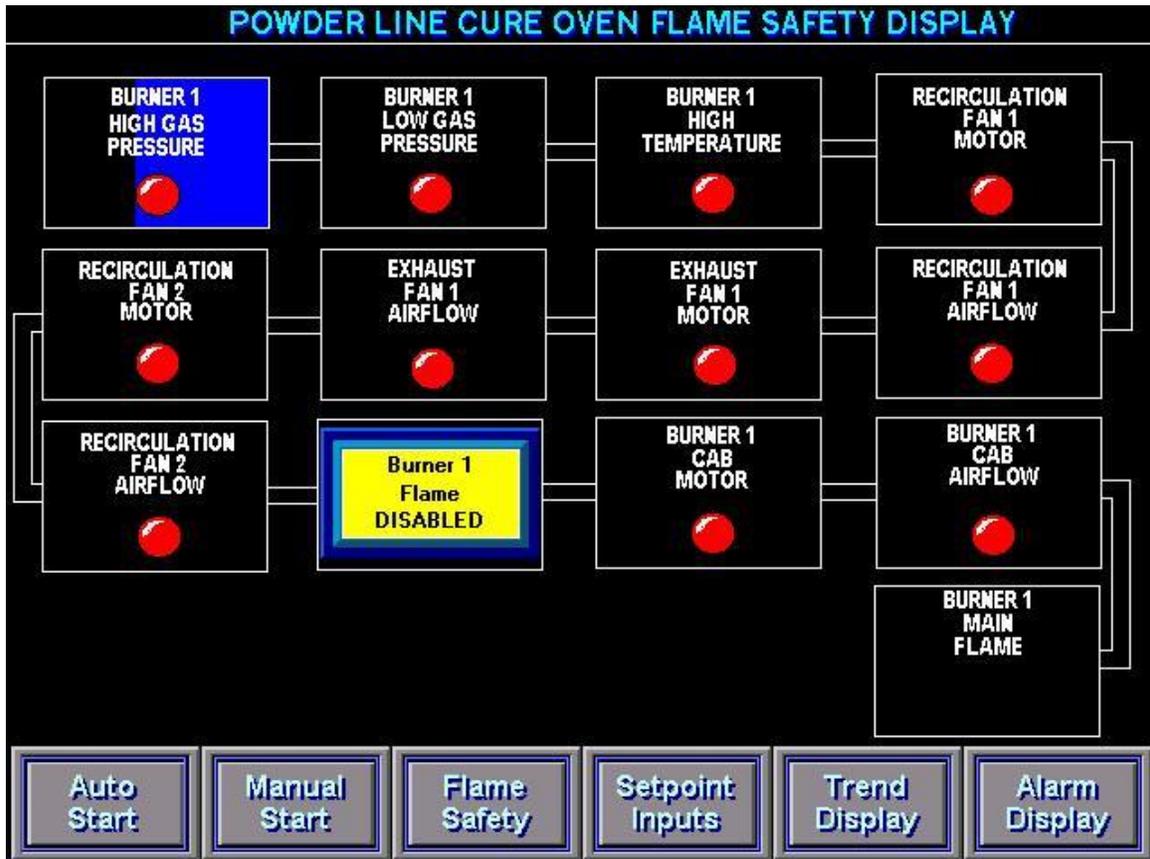

The Cure Oven Setpoint parameters are between 0 and 500 Degrees Fahrenheit.

The Dry Oven Setpoint parameters are between 0 and 500 Degrees Fahrenheit.

The Washer Setpoint parameters are between 0 and 160 Degrees Fahrenheit.

Cure Oven Display-Viewing the Cure Oven Burner Flame Safety

Pressing the **Cure Oven Display** Selection from the **Main Menu** screen can monitor the status of the **Cure Oven Burner Flame Safety**.

Each of the Flame Safeties are field wired in series, hence each must turn blue on the Display Screen sequentially starting from the **Emergency Stop Input, Master Control**.

If both **Gas Pressures** are in range then the Display will be blue up to the **High Temperature Switch**.

A Black **High Temperature Switch** indicates that it must be reset, it is located next to the Oven burner on top of the Oven.

As each Oven Fan is turned on its Airflow Switch will turn blue.

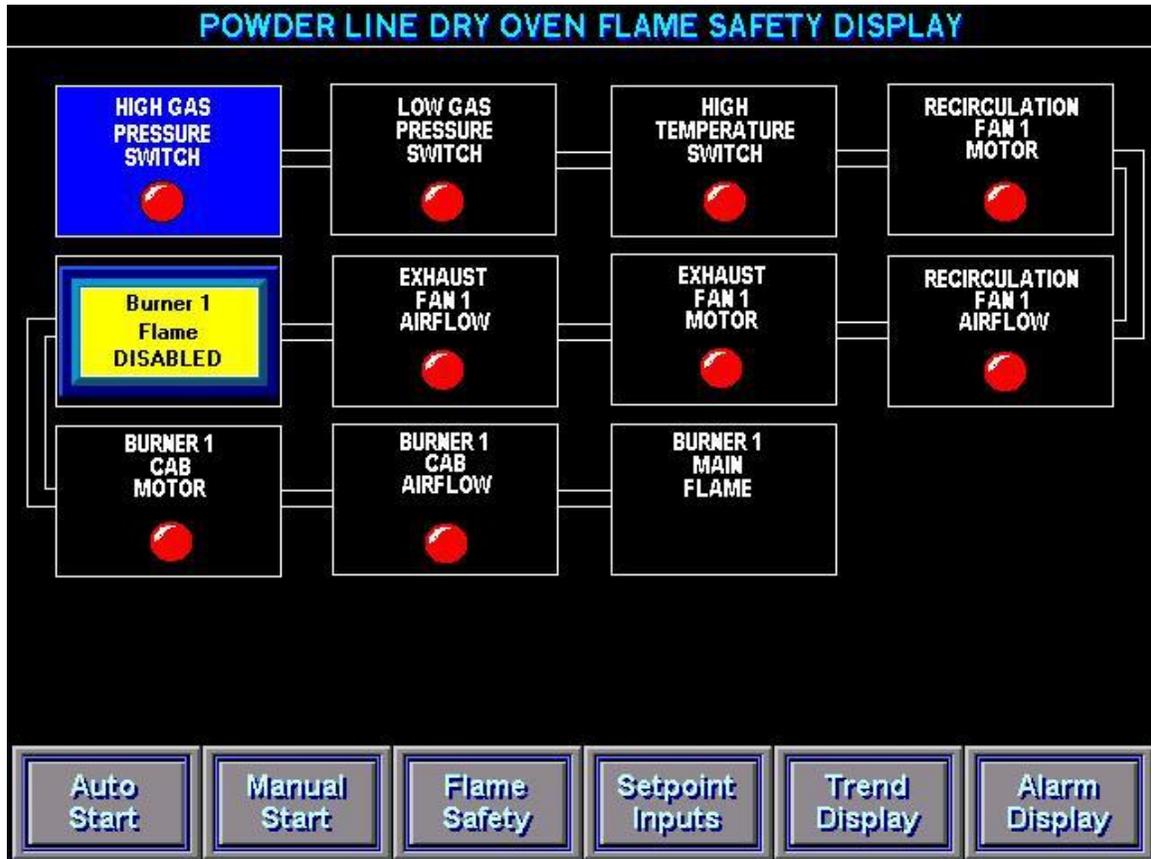

The Individual Burners may be disabled by depressing the **Flame Enable** buttons.

The **Purge Time** remaining will be displayed when all of the **Flame Safeties** are made.

The **Oven Burner Flame Off** will turn blue and display a Flame which indicates the Current Flame Output when a **Main Flame** is detected.

Dry-Off Oven Display-Viewing the Dry-Off Oven Burner Flame Safety

Pressing the **Dry-Off Oven Display Selection** from the **Main Menu** screen can monitor the status of the **Dry-Off Oven Burner Flame Safety**.

Each of the Flame Safeties are field wired in series, hence each must turn blue on the Display Screen sequentially starting from the **Emergency Stop Input, Master Control**.

If both **Gas Pressures** are in range then the Display will be blue up to the **High Temperature Switch**.

A black **High Temperature Switch** indicates that it must be reset, it is located next to the Oven burner on top of the Oven.

As each Oven Fan is turned on its Airflow Switch will turn blue.

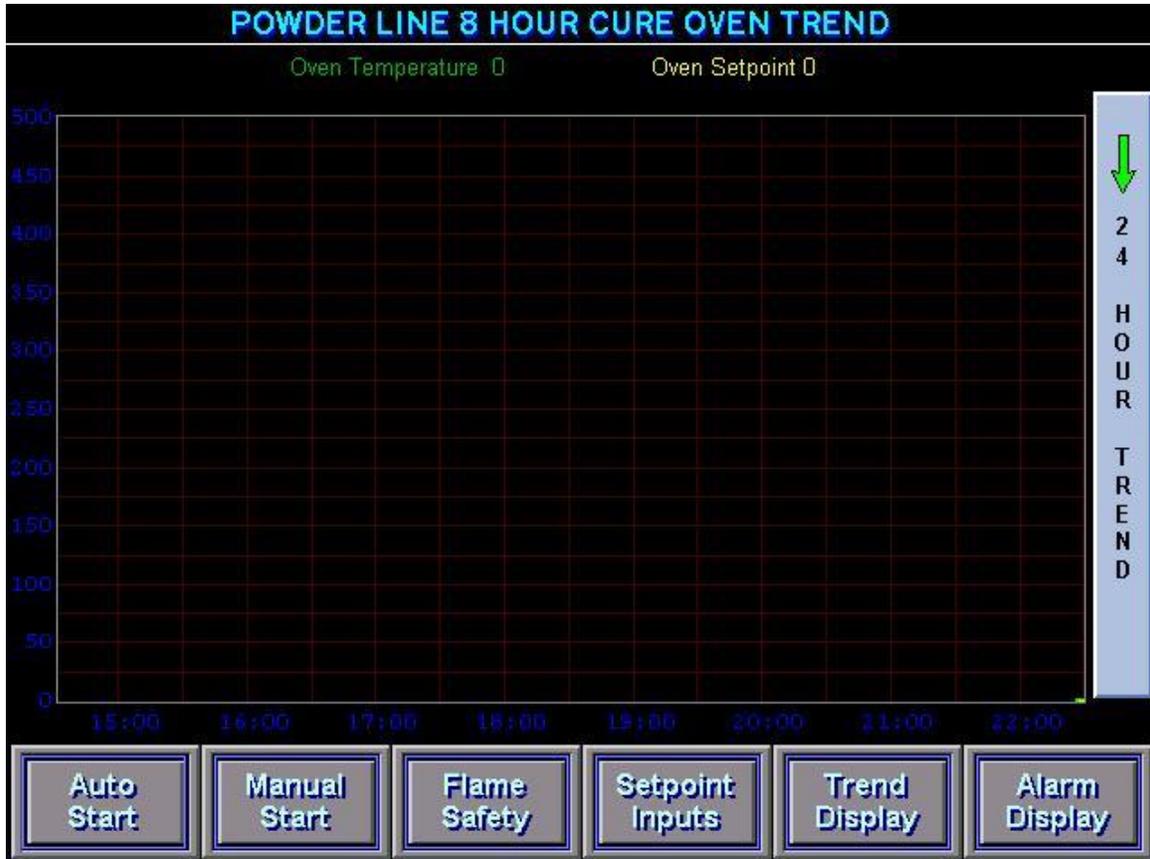

The Individual Burners may be disabled by depressing the **Flame Enable** buttons.

The **Purge Time** remaining will be displayed when all of the **Flame Safeties** are made.

The **Dry-Off Oven Burner Flame Off** will turn blue and display a Flame which indicates the Current Flame Output when a **Main Flame** is detected.

Cure Oven Trend Display

The status of the Combo Oven Temperatures and Setpoints are viewed on a Trend by depressing the **Cure Oven Trend** Button from any screen.

The recorded Temperatures move from **Right to Left** the way a Chart recorder operates.

The Temperatures and Setpoints are displayed in a Eight-Hour time span and may only be viewed while they are displayed.

The Cure Oven Trend Display will update every Two Minutes.

The **Burner 1 Temperature** is Displayed with a **Green Line**.

The **Burner 1 Setpoint** Temperature is Displayed with a **Yellow Line**.
